

# **Migration in India**

## **1999-2000**

**NSS 55<sup>th</sup> ROUND**  
**(July 1999 – June 2000)**

National Sample Survey Organisation  
Ministry of Statistics & Programme Implementation  
Government of India

September 2001

# *Preface*

*The National Sample Survey Organisation (NSSO) has been carrying out all-India household surveys on employment and unemployment with a large sample usually once in five years. The sixth such survey was conducted in the 55<sup>th</sup> round (July 1999 – June 2000). In this survey, data on migration particulars of the members of the sample households were collected as a part of the employment - unemployment schedule. Earlier, comprehensive data on migration were collected in NSS 38<sup>th</sup> (January- December 1983), 43<sup>rd</sup> (July 1987 - June 1988) and 49<sup>th</sup> (January – June 1993) rounds.*

*The report contains the results based on ten selected tables of the tabulation plan. It features the estimates pertaining to migration in India along with various characteristics associated with them. It contains four Chapters and an Appendix. Of these, Chapter 1 is introductory while Chapter 2 deals with the concepts and definitions of important terms used in the survey and which are relevant to this report. Chapter 4 deals with the summary findings on different aspects of migration.*

*The Field Operations Division (FOD) of the Organisation conducted the fieldwork for the survey. The collected data were processed and tabulated by the Data Processing Division (DPD). The Survey Design & Research Division (SDRD) developed the survey design and prepared the report. I am grateful to the Chairman and members of the Governing Council and Heads of various Divisions of the NSSO and their colleagues for the contribution made in preparing the report.*

*Comments/suggestions from the readers will be most welcome.*

*New Delhi  
September, 2001*

## HIGHLIGHTS

- About 27 per cent of the Indian population were migrants. The proportion of migrants to the total population was higher (33 per cent) in urban areas than that (24 per cent) in the rural areas. The proportion was the lowest among rural males.
- About 77 per cent of the migrants in India were female. The female migrants outnumbered their male counterparts in both rural and urban areas - more so in rural areas than in urban areas.
- Internal migrants represented about 99 per cent of the total migrants.
- Inter-district and inter-state movements were more frequent for migrants in urban areas than those for migrants in rural areas. About 20 per cent of the migrants in urban areas and 6 per cent of the migrants in rural areas came from other states.
- Among the four types of rural-urban migration streams, the rural-to-rural migration stream was dominant. It was also restricted to shorter distance movements as compared to other rural-urban migration streams.
- Adjoining states accounted for a large part of the inter-state migration.
- Among migrants in urban areas, more had migrated from rural areas than from urban areas. In urban areas, among the migrants, about 59 per cent of the males and about 58 per cent of the females were from the rural areas.
- Among the male migrants, 30 per cent in rural areas and 52 per cent in urban areas migrated due to reasons related to employment while among the female migrants, the corresponding proportions were only 1 per cent in rural areas and 3 per cent in urban areas.
- In the case of rural females, movements were mainly due to marriage (89 per cent) whereas for urban females, the two main reasons for migration were 'marriage' (59 per cent) and 'movements of parents/ earning members' (31 per cent).

- Among the male migrants, about 57 per cent of the rural-to-urban movements were due to reasons related to employment.
- Proportion of persons who migrated for reasons related to employment was higher among inter-migrants than that among migrants of any category in general.
- Proportion of migrants to the total population of the monthly per capita expenditure (MPCE) class was, in general, higher for the higher MPCE classes.
- Both in rural and urban areas, the male migrants were mainly from the employed category whereas the majority of the female migrants were from outside the labour force.
- A little over 1 per cent of the Indian population reported staying outside village/town for 60 days or more for employment/ better employment or in search of employment. This proportion was slightly higher in rural areas than in urban areas and was higher among the males than among the females.

## List of Appendix Tables

table no.	title	page no.
M1	Estimated number (in 00) of migrants by place of residence before migration and period elapsed since migration	A-1
M2	Per 1000 distribution of population by migration status and period elapsed since migration	A-13
M3	Estimated number (in 00) of migrants by place of residence before migration and reason for migration	A-19
M4	Per thousand distribution of migrants by reason for migration for each social group and location of last usual place of residence	A-31
M5	Per thousand distribution of migrants by reason for migration for each usual activity category before migration	A- 91
M6	Per thousand distribution of migrants by location of last usual place of residence for each household monthly per capita expenditure class	A-121
M7	Per thousand distribution of migrants by usual principal activity category after migration for each usual activity category before migration	A-151
M8	Per thousand distribution of migrants by reason for migration for each usual principal work activity status and occupation after migration	A-181
M9	Per thousand distribution of persons whose place of enumeration was the usual place of residence and who stayed away from villages/ towns for 60 days or more for employment or in search of employment by educational standard (general) for each usual principal activity category	A-187
M10	Per thousand distribution of persons whose place of enumeration was the usual place of residence and who stayed away from villages/ towns for 60 days or more for employment or in search of employment by MPCE classes for each usual principal activity category	A-217

# Chapter 1

## Introduction

### 1.0 The report in perspective

1.0.1 Movement is an integral part of human existence. A large number of movements like commuting to and from the place of work, travelling for business or pleasure etc. are of temporary nature while some other movements are relatively of permanent nature and involve a change of residence from one place to another place. These movements which result into the change of the place of residence of the individuals are treated as migration. Though social, cultural, political, personal and natural forces have a bearing on migration, viewing it as an economic phenomenon receive special attention. People may be motivated to change their place of residence because of lack of employment opportunities in the area where they are residing or in the hope of finding better opportunities elsewhere. In view of this, in the 55<sup>th</sup> round survey of NSSO, along with the employment and unemployment particulars, data on migration particulars of the members of the sample households were collected through the 'employment - unemployment' schedule (viz. schedule 10).

1.0.2 This report is based on the data on migration particulars obtained through the 'employment - unemployment' schedule of the 55<sup>th</sup> round survey (July 1999 – June 2000) of NSSO carried out in the central sample. Based on the data collected during the entire period, estimates pertaining to migration in India along with various characteristics associated with them have been presented in this report.

1.0.3 Based on the detailed information collected from the 'central sample' through the employment - unemployment schedule during the 55<sup>th</sup> round survey of NSSO, 8 reports were planned to be brought out. Seven reports have already been brought out and this is the last report in the series. The first report, viz. Report number 455, presented the key results on employment and unemployment in India, 1999-2000. The second report (report number: 458) dealt, in detail, with the employment-unemployment estimates measured in terms of the three basic approaches of usual status, current weekly status and current daily status and their patterns along with their correlates. It also covered some aspects of underemployment. The third report dealt with non-agricultural workers by various attributes with special emphasis on workers in the informal sector, i.e. those working in proprietary or partnership type of enterprises (Report no. 460). The fourth report (Report No. 462), discussed some features on employment and unemployment situation in cities and towns of India. The fifth one (Report no. 465), was based on the participation of women in household work and other specified household activities. The sixth report (report no. 468) dealt with the employment-unemployment estimates of the people belonging to different religions in India along with their correlates like educational attainment, expenditure levels, land cultivated, etc. The seventh report (report no. 469) dealt with the employment-unemployment estimates of the people belonging to different social groups in India. The present report, the last in the series, deals with the estimates pertaining to migration in India, social and economic profile of the migrants, reasons for migration, etc.

## 1.1 Background

1.1.1 *Sources of migration data:* Census of India is the single largest source of data on migration characteristics for the people of India. Various surveys conducted by the NSSO are also the important sources of migration data. To assess the volume and structure of migration in India, starting with the 9<sup>th</sup> round (May-September, 1955), NSSO conducted a number of surveys to collect data on migration as part of its employment and unemployment enquiries. In the 9<sup>th</sup>, 11<sup>th</sup> and 12<sup>th</sup> rounds of surveys, migration particulars were collected for the labour force population only. From the 13<sup>th</sup> round onwards, more detailed information on migration has been collected. In the 18<sup>th</sup> round, survey on migration was conducted on a much larger scale. In the NSS 28<sup>th</sup> round survey on birth, death, morbidity and disability, migration particulars of the usual members of the sample households were also collected. In the 38<sup>th</sup> round, collection of migration data was integrated with the regular quinquennial survey on employment & unemployment. The same approach was followed during the 43<sup>rd</sup> round also. Prior to the 55<sup>th</sup> round survey, data on migration was collected during the 49<sup>th</sup> round survey through the Schedule 1.2 which had a comprehensive coverage including, inter-alia, housing condition and Migration in India.

## 1.2 The present survey

1.2.1 An all-India survey on the situation of employment and unemployment in India during the period July, 1999-June, 2000 was carried out as part of the 55<sup>th</sup> round of the National Sample Survey Organisation (NSSO). In this survey, information on various facets of employment and unemployment as well as on migration in India was collected through the employment-unemployment schedule (schedule 10).

1.2.2 In the present survey, information on migration particulars was collected for each household member of the sample household through the employment-unemployment schedule. From each of the sample migrants, information on reason for migration, period elapsed since migration, location of last usual place of residence, usual activity pursued at the time of migration etc. was collected. In this survey, to assess the short duration movements of the people of India, for each person who stayed in the sample village or town for at least 6 months, it was ascertained whether during last 365 days preceding the date of survey he/she stayed away from the village/town for 60 days or more either for employment or better employment or in search of employment.

1.2.3 A sub-set of sample households within the survey period were revisited after a gap of three months and an abridged form of schedule 10, viz. schedule 10.1, comprising the main items of enquiry of schedule 10 including that of migration was canvassed for these households. Further, departing from the past practice of canvassing schedule 10 and schedule 1.0 (household consumer expenditure) on the same set of households, in this round, these two schedules of enquiry were canvassed in two separate sets of households.

1.2.4 *Geographical Coverage:* The survey covered the whole of the Indian Union excepting (i) Ladakh & Kargil districts of Jammu and Kashmir, (ii) 768 interior villages of Nagaland situated beyond 5 kms. of the bus route and (iii) 172 villages of Andaman & Nicobar Islands which remain inaccessible throughout the year. A few other areas of Jammu & Kashmir were also excluded from the survey coverage owing to unfavourable field conditions.

*1.2.5 Method of data collection:* The survey used the interview method of data collection from a sample of randomly selected households. The sample design on the basis of which such selection was made is stated in brief in the following sub-section.

*1.2.6 Period of survey and work programme:* The fieldwork of 55<sup>th</sup> round of NSSO started from 1<sup>st</sup> July, 1999 and continued till 30<sup>th</sup> June, 2000. As usual, the survey period of this round was divided into four sub-rounds, each with a duration of three months, the 1<sup>st</sup> sub-round period ranging from July to September, 1999, the 2<sup>nd</sup> sub-round period from October to December 1999 and so on. An equal number of sample FSU's was allotted for survey in each of these four sub-rounds.

### *1.2.7 Sampling design*

*1.2.7.1 An outline of the sampling design:* The sampling design adopted for the survey was essentially a stratified multi-stage one for both rural and urban areas. The first stage units (FSUs) were villages (panchayat wards for Kerala) for rural areas and NSS Urban Frame Survey (UFS) blocks for urban areas. The ultimate stage units (USUs) were households. The procedure for selection of fsus/usus are given in detail in chapter 3 of this report. Large FSUs were subdivided into hamlet-groups (rural)/sub-blocks (urban). Details of the formation of hamlet-groups/ sub-blocks and procedure of selection of households are also given in chapter 3.

*1.2.7.2 Sampling Frame for FSUs:* The list of villages (panchayat wards for Kerala) as per 1991 Census and latest lists of UFS blocks of NSSO were respectively used for selection of rural and urban sample FSUs. For selection of sample villages from the State of Jammu & Kashmir, the list of villages as per 1981 Census was used as the sampling frame. Moreover, all the uninhabited villages of the country as per 1991 Census, interior villages of Nagaland situated beyond 5 kms. of a bus route and inaccessible villages of Andaman & Nicobar Islands were left out of the survey coverage of the NSS 55<sup>th</sup> round.

*1.2.7.3 Sample Size – first stage units:* A total number of 10,384 FSUs (6,208 villages and 4,176 urban blocks) was selected for survey in the central sample at the all-India level in the 55<sup>th</sup> round for canvassing schedule 10. Sample size for the whole round for each State/UT x Sector (i.e. rural/urban) was allocated equally among the 4 sub-rounds. Sample FSUs for each sub-round were selected afresh in the form of 2 independent sub-samples. Thus, there were 8 such sub-samples. In addition, 3894 FSUs – 1298 in each of the sub-rounds 2, 3 and 4, corresponding to sub-samples 1, 3 and 5 - were re-visited for canvassing schedule 10.1.

*1.2.7.4 Sample size – second stage units:* For schedule 10, in each of the eight sub-samples, from each selected village in rural areas and from each selected urban block in urban areas, a sample of 12 households were surveyed. Apart from this, in the 3 re-visited sub-samples, viz. sub-samples 1, 3 and 5, the abridged schedule 10, viz. schedule 10.1, was canvassed during the re-visit to the same set of households. In addition, in these re-visited sub-samples, from among the newly formed households found during the re-visit of a FSU, at most 1 household was surveyed from each of the two segments and only schedule 10 was canvassed in those households. In the central sample, 1,65,244 households were actually surveyed – 97,986 in rural areas and 67,258 in urban areas. As regards the actual number of persons surveyed, it was 5,09,779 in the rural sector and 3,09,234 in the urban sector.

### **1.3 Contents of the Report**

1.3.1 As stated earlier, this report deals with various estimates on migration characteristics along with their correlates as obtained from tables generated on data collected on relevant items for the entire round. Consequently, all discussions in this report are limited to only such items/concepts, based on which estimates have been generated. A detailed explanation of these are given in the next chapter entitled 'Concepts and Definitions'.

1.3.2 This report contains four chapters, including the present introductory chapter, and appendix tables. Chapter 2 states in detail the concepts and definitions of only those terms used in the survey in connection with the various items covered in this report. While chapter 3 gives a fairly detailed description of the sample design and estimation procedure used for the survey, chapter 4 discusses the main findings of the survey relating to the migration profile in India. The detailed tables based on which this report is brought out are presented in the Appendix. Appendix of the report contains 10 tables viz. M1 to M10.

1.3.3 All the estimates presented in this report are based on Central sample data only. The cell-level figures in any of the detailed tables, when added up, may not exactly equal the figure shown against the 'total' column (or line) due to (i) rounding off and/or (ii) presence of non-response cases. It may be noted that the estimates of aggregates given in the detailed tables helps to combine the rates/ ratios. The survey estimates of the ratios or rates may be applied to the census projected population as on 01.01.2000, the mid-point of the 55<sup>th</sup> round survey period (July, 1999 – June, 2000) to arrive at the absolute number in any category.

## Chapter 2

### Concepts and Definitions

2.0 The concepts and definitions of some important terms used in the survey and which are relevant to this report viz., those used to generate the tables and various estimates on migration are explained in the following paragraphs.

2.1 **Household:** A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb “normally” means that temporary visitors were excluded but temporary stay-aways were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident employee or a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer’s/host’s household. “Living together” was given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person’s family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household except that a family living in a hotel (say) was considered one household only. The same principle was applicable for the residential staff of such establishments.

2.2 **Economic activity:** Any activity resulting in production of goods and services that add value to national product was considered as an economic activity. Such activities included production of all goods and services for market (market activities), i.e. production for pay or profit, and, the production of primary commodities for own consumption and own account production of fixed assets, among the non-market activities.

2.3 **Activity status:** It is the activity situation in which a person was found during a reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during a reference period:

- (i) working or being engaged in economic activity (work) as defined above,
- (ii) being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if the 'work' is available and
- (iii) being not engaged in any economic activity (work) and also not available for 'work'.

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employment' and 'unemployment', respectively.

## 2.4 *Usual principal activity status:*

2.4.1 The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively longer time (i.e. major time criterion) during the 365 days preceding the date of survey was considered as the *usual principal activity status* of the person. To determine the broad usual principal activity status of a person, he/she was first categorised as belonging to the labour force or not during the reference period *on the basis of major time criterion*. Persons thus adjudged as not belonging to the labour force were assigned the broad activity status 'neither working nor available for work'. For persons belonging to the labour force, the broad activity status of either 'working' or 'not working but seeking and/or available for work' was ascertained based on the same criterion viz. relatively longer time spent in accordance with either of the two broad statuses within the labour force during the 365 days preceding the date of survey.

2.4.2 Each of the three broad activity statuses mentioned above was further sub-divided into several detailed activity categories. Within the broad activity status, the detailed activity status of a person pursuing more than one such activity was determined on the basis of the relatively longer time spent on such activities. The detailed usual principal activity categories used in the survey (along with the codes assigned to them as indicated in brackets) are stated below:

(1) working or being engaged in economic activities (*employed*):

- (a) *worked in household enterprise (self-employed) as own account worker* (11);
- (b) *worked in household enterprise (self-employed) as employer* (12);
- (c) *worked as helper in household enterprises (unpaid family worker)* (21);
- (d) *worked as regular salaried/wage employee* (31);
- (e) *worked as casual wage labour (i) in public works (41), (ii) in other types of work* (51);

(2) not engaged in work but seeking and/or available for work (*unemployed*) (81)

(3) not engaged in work and also not available for work (*not in labour force*):

- (a) *attended educational institutions* (91);
- (b) *attended domestic duties only* (92);
- (c) *attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle-feed, etc.) sewing, tailoring, weaving, etc. for household use* (93);
- (d) *rentiers, pensioners, remittance recipients, etc.* (94);
- (e) *not able to work due to disability* (95);
- (f) *beggars, prostitutes* (96); and
- (g) *others* (97)

2.4.3 **Workers (or employed)**: Persons who were engaged in any economic activity during the major part of the year were treated as workers according to usual status. These persons were classified under the activity categories 11-51.

2.4.4 **Seeking or available for work (or unemployed)**: Persons, who owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those who were 'seeking or available for work' (or unemployed). Unemployed persons were classified under the activity category 81.

2.4.5 **Labour force**: Persons, who, were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. Persons who were neither 'working' nor 'seeking or available for work' for various reasons during the reference period were considered as 'out of labour force'.

2.4.6 **Self-employed**: Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on own-account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (i.e., how, where and when to produce) and *economic independence* (i.e., market, scale of operation and money) for carrying out their operation. These persons were classified in the activity categories 11-21. Self-employed persons were categorised as follows:

- (i) *own-account workers* (11): those self-employed persons who operated their enterprises on their own account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour. They could, however, have had unpaid helpers to assist them in the activity of the enterprise;
- (ii) *Employers* (12): those self-employed persons who worked on their own account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour; and
- (iii) *helpers in household enterprise* (21): those self-employed persons (mostly family members) who were engaged in their household enterprises, working full or part time and did not receive any regular salary or wages in return for the work performed. They did not run the household enterprise on their own but assisted the related person living in the same household in running the household enterprise.

2.4.7 **Regular salaried/wage employee**: These were persons who worked in others' farm or non-farm enterprises (both household and non-household) and, in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.

2.4.8 **Casual wage labour**: A person who was casually engaged in others' farm or non-farm enterprises (both household and non-household) and, in return, received wages according to the terms of the daily or periodic work contract, was a casual wage labour.

**2.5 Industry-occupation:** The description of the industry-occupation was relevant to the type of economic activity pursued by the person. NIC-1998 was followed for classifying industries and NCO-1968 was followed for classifying occupations. In case two or more industry-occupation combinations corresponding to the status code were reported by a person, the principal industry-occupation was taken as the one in which *relatively more time* was spent during the reference period by the person.

**2.6 Usual place of residence (upr):** In this survey, usual place of residence (upr) of a person was defined as a place (village/town) where the person had stayed continuously for a period of six months or more.

**2.7 Migrant:** A member of the sample household was treated as a migrant if he/she had stayed continuously for at least six months or more in a place (village/town) other than the village/town where he/she was enumerated. The village/town where the person had stayed continuously for at least six months or more prior to moving to the place of enumeration (village/town) was referred to as the 'last usual place of residence' of that migrated person. Shifting of residence within village/town was not considered as an event of migration.

**2.8 Period since leaving the last usual place of residence:** The period elapsed since leaving the last usual place of residence till the date of survey (i.e. period elapsed since migration) was recorded in completed number of years i.e. part of any year was ignored to get the period since leaving the last usual place of residence. Periods of temporary stay (less than 6 months) in other places after leaving the last usual place of residence were also included for determining period since migrated.

**2.9 Location of last usual place of residence:** The location of last usual place of residence of the migrants was recorded in terms of 7 categories viz.

*(i) located in rural areas of same district, (ii) located in urban areas of same district, (iii) located in rural areas of another district of same state, (iv) located in urban areas of another district of the same state, (v) located in rural areas of another state, (vi) located in urban areas of another state and (vii) located in another country.*

**2.10 Reason for leaving last usual place of residence:** Reasons for leaving the last usual place of residence (i.e. reasons for migration) were recorder in terms of 13 categories. These were

*(i) in search of employment, (ii) in search of better employment, (iii) to take up employment/ better employment, (iv) transfer of service/contract, (v) proximity to place of work, (vi) studies, (vii) acquisition of own house/flat, (viii)housing problem, (ix)social/ political problem, (x) health, (xi)marriage, (xii) migration of parent/earning member and (xiii) others.*

## Chapter 3

### Sample Design and Estimation Procedure

#### 3.1 Sample Design

3.1.1 A stratified multi-stage sampling design for rural as well as urban areas was adopted for selection of the sample units for the survey. The first stage units (FSU) were the census villages (panchayat wards for Kerala) for rural areas and the NSSO Urban Frame Survey (UFS) blocks for urban areas. The ultimate stage units (USU) were the households for both rural and urban areas.

3.1.2 *Selection of the first-stage units:* The various steps involved before making the selection of the FSUs are discussed at length in the following few paragraphs before taking up the issue of selection of USUs within a FSU.

3.1.2.1 *Sampling frame for the first stage units (FSU's):* For rural areas, the list of census villages as per 1991 population census (list of census villages as per 1981 Census for the State of Jammu & Kashmir) constituted the sampling frame for selection of sample FSUs for most of the states. For the rural areas of Kerala, however, the list of panchayat wards was used as the sampling frame for selection of panchayat wards. For Nagaland, the list of villages located within 5 kms. of a bus route constituted the sampling frame, whereas, the list of accessible villages constituted the sampling frame for Andaman & Nicobar Islands. All the uninhabited villages of the country as per 1991 Census were left out of the survey coverage of the NSS 55th round. For the urban areas, the latest lists of UFS blocks constituted the sampling frame for selection of sample FSUs.

3.1.2.2 *Stratification of the first stage units in rural areas:* From the list of villages of each State/ Union Territory (U.T.), initially, two special strata were formed by considering villages (a) with very small population and (b) with very high population. These are formally stated below:

Stratum 1: all FSU's with population between 1 to 100,

Stratum 2: FSU's with population more than 15,000.

The above two strata were spread across a given state and were not confined to any particular administrative division within the state. Each of the above two strata was formed if at least 50 such FSU's were there in the respective frames. Otherwise, these type of villages were included in the general strata as described below:

After formation of strata 1 and 2 (wherever applicable), the remaining villages of the State/ U.T. were considered for formation of general strata. While forming general strata, efforts were made to treat each district with population less than 2 millions as a separate stratum. If limitation of sample size did not allow forming so many strata, smaller districts within a particular NSS region were merged to form a stratum. Each district with rural population of 2 millions or more as per 1991 Census (1.8 millions or more as per 1981 Census in case of Jammu & Kashmir) was as usual split into a number of strata.

3.1.2.3 *Stratification of the first stage units in urban areas*: Within each NSS region, strata were formed by grouping towns on the basis of their population as per 1991 population census (1981 Census for the State of Jammu & Kashmir) following certain specifications which are stated below in a tabular form:

Stratum number	Composition of strata within a NSS region
1, 3, 5 *	'hospital area' (HA) / 'industrial area' (IA) / 'bazaar area' (BA) blocks taken together of each single city with a population of 10 lakhs or more (there could be a maximum of 3 such cities within an NSS Region)
2, 4, 6 *	Other blocks of each single city with a population of 10 lakhs or more
7	HA or IA or BA blocks of all towns with population between 50,000 to less than 10 lakhs
8	Other blocks of all towns with population between 50,000 to less than 10 lakhs
9	HA or IA or BA blocks of all towns with population less than 50,000
10	Other blocks of all towns with population less than 50,000

\* Stratum numbers 3, 4, 5 & 6 remained void if there was only one city in an NSS region with a population of 10 lakhs or more.

It may be noted that if limitation of sample size did not allow forming so many strata, all blocks of stratum 7 were merged with those of stratum 8 and all blocks of stratum 9 were merged with those of stratum 10.

3.1.2.4 *Allocation of FSU's among Strata*: At the all-India level, a total number of 10,384 FSU's (6208 villages and 4176 urban blocks) was selected for survey in the *central sample* in the 55th round. The actual state/ U.T. level allocation of FSUs in both the rural and urban sector are given in Table A at the end of this Appendix. The sample size at the state/U.T. level was allocated as follows:

- (a) *in rural areas*: state/ UT level rural sample size was allocated among the rural strata in proportion to population.
- (b) *in urban areas*: state/ UT level urban sample size was first allocated among the three classes of towns (i.e. 10 lakh +, 50000 to less than 10 lakhs and less than 50,000) in proportion to population. Then sample allocation for each of the three classes of towns, within an NSS region, was further allocated between two strata types consisting of - (i) HA/ IA/ BA blocks, and (ii) the rest in proportion to total number of FSU's in the respective frames with double weightage given to the first category of blocks.

3.1.2.5 *Sub-round wise allocation*: Sample size for the whole round for each State/UT x Sector (i.e. rural/ urban) were allocated equally among the 4 sub-rounds. Stratum level allocations for both rural and urban areas of a sub-round were made in even numbers in order to facilitate selection of FSU's in the form of 2 independent sub-samples. Sub-sample numbers were 1 & 2 for sub-round 1; 3 & 4 for sub-round 2; 5 & 6 for sub-round 3 and 7 & 8 for sub-round 4. One salient feature of the 55th round was the *rotation sampling scheme*, which was adopted for the

first time in the NSS for the purpose of collection of employment-unemployment data from central sample only. Under this scheme, 1 sub-sample of the sampled first stage units (FSU's) of each sub-round was revisited in the subsequent sub-round. From each such FSU, sample households visited in the previous sub-round for collecting data on employment-unemployment were revisited in the subsequent sub-round for collecting employment-unemployment details.

3.1.2.6 *Selection of first-stage units*: For each sub-round, sample first-stage units from each stratum were selected afresh in the form of 2 independent sub-samples by following circular systematic sampling with:

- (a) probability proportional to population for all rural strata other than stratum 1, and
- (b) equal probability for rural stratum 1 as well as for all urban strata.

3.1.3 *Selection of Ultimate Stage Units within a FSU*: The remaining paragraphs of this sub-section outline the various steps leading to the actual selection of USUs within a FSU.

3.1.3.1 *Formation of hamlet-groups/ sub-blocks*: In some cases, depending upon the approximate present population (P) and approximate total number of non-agricultural enterprises (E) of the villages/ blocks, the FSUs were further divided into a fixed number of hamlet groups/ sub-blocks, as per the rules stated below:

Value of P	No. of hg's/ sb's formed in the FSU as per population criterion	Value of E	No. of hg's/ sb's formed in the FSU as per enterprise criterion
(1)	(2)	(3)	(4)
Less than 1200	1 @	Less than 100	1 @
1200 – 1999	5	100 – 249	5
2000 – 2399	6	250 – 299	6
2400 – 2799	7	300 – 349	7
2800 – 3199	8	350 – 399	8
(and so on)		(and so on)	

@ no. of hg's/ sb's = '1' implies that the whole FSU was considered for listing.

It may be noted that for rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur and Doda districts of Jammu & Kashmir, number of hamlet groups formed in the village as per population criterion was: 1 for  $P < 600$ , 5 for  $P = 600$  to 999, 6 for  $P = 1000$  to 1199, 7 for  $P = 1200$  to 1399, 8 for  $P = 1400$  to 1599, and so on (procedure remaining unchanged as per enterprise criterion). Further, the higher of the two values obtained as per population and enterprise criteria was taken as the number (D) of hamlet-groups (hg)/ sub-blocks (sb) to be formed in the FSU. In cases where hg's/ sb's were formed in the sample FSU, the same was done by more or less equalizing the population of the different hgs/ sbs of the FSU.

3.1.3.2 *Formation of Segments within FSU*: The hg/ sb having maximum concentration of non-agricultural enterprises was selected with certainty for listing of households/ enterprises. This hamlet group/ sub-block was referred to as segment 1. From the remaining (D-1) hg's/ sb's of the FSU, 2 more hg's/ sb's were selected circular systematically and these 2 selected hg's/ sb's together were referred to as segment 2 for doing a combined listing of households. The listing of households was done only in segments 1 and 2 of the FSU. The FSUs not requiring hg/ sb formation were treated as segment 1 for the purpose of data collection and estimation.

3.1.3.3 *Sampling frame of households*: All households of segments 1 and 2 of the FSU were listed independently and this list of households of the segments 1 and 2 constituted the sampling frame for the purpose of selection of sample households from the corresponding segments.

3.1.3.4 *Stratification of households*: All the households listed in a segment (both rural & urban) were stratified into two second stage strata, viz. 'affluent households' which formed second stage stratum 1, and the rest which formed second stage stratum 2. In the rural sector, a household was classified as 'affluent' if the household owned certain items like motor car/ jeep, colour TV, telephone, etc. or owned land / livestock in excess of certain limits. In the urban sector, the households with MPCE (monthly per capita consumer expenditure) greater than certain limit for a given town/city were treated as 'affluent' households and were included in the frame of second stage stratum 1, and rest of the urban households were included in the frame of second stage stratum 2.

3.1.3.5 *Selection of households*: Sample households were selected from the respective frames by circular systematic sampling with equal probability. For the purpose of systematic sampling, households in the frame of second stage stratum 2 were arranged by means of livelihood x land possessed classes for rural samples and by means of livelihood x MPCE classes for urban samples. The number of households selected for survey on employment-unemployment from different segments x second stage stratum (within a FSU) are specified below:

segment	Household allotment *		
	second stage stratum		
	1	2	total
(1)	(2)	(3)	(4)
FSU with hg/ sb formation:			
1	1	3	4
2	1	7	8
FSU with no hg/ sb formation:			
1	2	10	12

\* The fsus of sub-sample 1, sub-sample 3 and sub-sample 5 were re-visited during sub-round 2, sub-round 3 and sub-round 4 respectively. In the fsus of these re-visit sub-samples, all the households where schedule 10 was previously canvassed (i.e. during the previous sub-round) were re-visited for canvassing schedule 10.1. However, in case such a household could not be surveyed during re-visit, it was substituted and schedule 10 was canvassed in the substituted household. Further, schedule 10 was also canvassed for those households, which were 'casualty' during, visit 1 but could be surveyed during the re-visit. From among the newly formed households found during the re-visit of a fsu (which constituted the second stage stratum 9), at most 1 household was surveyed from each of the 2 segments and schedule 10 only was canvassed for those households.

## 3.2 Estimation Procedure

3.2.1 This estimation procedure adopted in the 55<sup>th</sup> round for schedule 10 provides

- (a) estimates on quarterly/ sub-round basis, and
- (b) the estimate of error from the sub-sample replicates.

Tabulated estimate for a quarter/ sub-round was obtained by combining the estimates of the corresponding sub-sample replicates. The estimation procedure adopted in the 55<sup>th</sup> round for schedule 10 is described below.

3.2.2 *Notation:* The notations used for estimation procedure are given below:

- a = subscript for the a-th stratum
- r = subscript for the r-th sub-sample replicate (r = 1,2,...,8)
- q = subscript for the q-th sub-round / quarter (q=1,2,3 & 4)
- f = subscript for the f-th sampled village/ block as First Stage Unit (FSU)
- s = subscript for the s-th segment of sampled village/ block (s= 1 & 2)
- c = subscript for the c-th second stage stratum of households in the sampled village/ block (c= 1,2); for new households during revisit, c= 9.
- j = subscript for the j-th sampled household
- p = subscript for pooled estimate
- z = size used for selection of an FSU from the sampling frame
- Z = total of sizes in the sampling frame for the stratum
- n = number of sampled FSU surveyed within a stratum and a sub-sample replicate (including zero cases and uninhabited cases but excluding casualty cases) and used for tabulation
- L = number of sub-sample replicates surveyed and used for tabulation
- D = number of hamlet-groups/ sub-blocks formed in rural/ urban sampled FSU
- H = total number of households listed in the appropriate frame
- h = number of sampled households surveyed and used for tabulation from the frame
- y, x = value of characteristic y, x obtained in the sample
- $\bar{y}, \bar{x}$  = estimated value of characteristic y, x obtained from the sample.

3.2.3 *Estimates of aggregates:* If  $\bar{y}$  be the estimate of aggregate of any characteristic y for a given stratum (a), and for a particular sub-round (q) and sub-sample replicate (r), the formula used for estimating a characteristic of household from a given 2nd stage stratum (c) is as specified below:

*For rural areas:*

$$\hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \frac{1}{Z_f} \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj}$$

where  $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$ , for segment 1 (s=1) and  $B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}$ , for segment 2 (s=2).

*For urban areas:*

$$\hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj}$$

where,  $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$ , for segment 1 (s=1) and  $B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}$ , for segment 2 (s=2).

These formulae are provided for the general case of FSU's having 2 segments 1 & 2. For the FSU's requiring no hg/ sb formation, the formula is identical to that given for segment 1 while the contribution from segment 2 is taken as zero.

Finally, the estimate of a characteristic y for a stratum (a), for a particular sub-round (q) and a sub-sample replicate (r) (which actually represented  $\hat{Y}_{aqr}$ ) was obtained as  $\hat{Y} = \sum_c \hat{Y}_c$ .

The combined estimate for a particular stratum and a particular sub-round was computed as the average of sub-sample replicate estimates and is given below:

$$\hat{Y}_{aq} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{aqr}$$

If  $\hat{Y}_{qr}$  be the State/ UT/ Region level aggregate from the r-th sub-sample replicate and q-th sub-round, and  $\hat{Y}_{qp}$ , the combined estimate of the aggregate based on the whole sample, for a given sub-round/ quarter q, then:

$$\hat{Y}_{qr} = \sum_a \hat{Y}_{aqr} \quad \text{based on sub-sample replicate group r,}$$

and

$$\hat{Y}_{qp} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{qr} \quad \text{based on all sub-sample replicates.}$$

**3.2.4 Estimates of ratios:** If  $\hat{X}$  &  $\hat{Y}$  be the State/ UT/ Region level aggregate estimate corresponding to variables x and y, then the estimate of ratio, in general, is given by

$$\hat{R}_r = \frac{\hat{Y}_r}{\hat{X}_r} \quad \text{based on sub-sample group r,}$$

and

$$\hat{R}_p = \frac{\hat{Y}_p}{\hat{X}_p} \quad \text{based on the whole sample.}$$

Estimates for the sub-round (/quarter)  $\hat{R}_{qr}$  and  $\hat{R}_{qp}$  was obtained by replacing  $\hat{Y}_r$  and  $\hat{Y}_p$  by  $\hat{Y}_{qr}$  and  $\hat{Y}_{qp}$ , respectively and  $\hat{X}_r$  and  $\hat{X}_p$  by  $\hat{X}_{qr}$  and  $\hat{X}_{qp}$ , respectively.

**3.2.5 Treatment for casualty:**

I) If  $H_{fsc} > 0$  but  $h_{fsc} = 0$  for a particular 2nd stage stratum of households in a FSU with no hamlet-group/ sub-block formation (ie.  $D_f = 1$ ), it was a case of casualty and the value of  $n$  was reduced by 1.

II) If  $D_f > 1$  and  $H_{fs'c} > 0$  but  $h_{fs'c} = 0$  for  $s=1$  (say,  $s'$ ) and if it was not a case for the entire FSU, here  $n$  was not reduced by 1 and in this case  $[(D_f - 1)/2] \times H_{fsc}$  was replaced by  $\{H_{fs'c} + [(D_f - 1)/2] \times H_{fsc}\}$  in the formula for  $s=2$ .

III) If  $D_f > 1$  and  $H_{fs'c} > 0$  but  $h_{fs'c} = 0$  for  $s=2$  (say,  $s'$ ) and if it was not a case for the entire FSU, here  $n$  was not reduced by 1 and in this case,  $H_{fsc}$  was replaced by  $\{H_{fsc} + [(D_f - 1)/2] \times H_{fs'c}\}$  in the formula for  $s=1$ .

IV) If  $H_{fsc} > 0$  but  $h_{fsc} = 0$  for a particular second stage stratum of households in both the segments ( $s=1$  &  $2$ ) in an FSU, it was a case of casualty and the value of  $n$  was reduced by 1.

## Chapter 4

### Summary of findings

#### 4.0. Introduction

4.0.1 The 55th round survey of NSSO was conducted in 6048 villages and 4125 urban blocks of India during July 1999-June 2000, in which, apart from collecting employment-unemployment particulars, certain information on socio-economic condition of sample households and demographic particulars like migration etc. pertaining to the surveyed individuals were also collected through the employment-unemployment schedule. Based on the data collected on migration through this schedule during the NSS 55<sup>th</sup> round survey, 10 detailed tables viz. M1 to M10 have been generated which are presented in the Appendix. Of these, four tables viz. M4, M6, M9 and M10 are based on schedule 10 while the remaining 6 tables are based on the re-visit schedule as well. The summary tables of this chapter have been compiled from these detailed tables. As the estimates based on small sample sizes are not likely to be significantly reliable, results for the states/union territories based on smaller sample sizes have not been presented. This report presents results for 15 major states viz. Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal with a more detailed picture at the all-India level. All-India estimates are based on data for all the states and union territories.

4.0.2 In this chapter, the main findings relating to the proportions and the distribution of the migrant population, social and the economic profile of the migrants, and the reason for their migration etc. have been presented. In some cases, a comparison with earlier survey results is also done at the all-India level. Proportions and distribution of persons 'whose place of enumeration was the usual place of residence (upr) and who stayed away from their villages/towns for 60 days or more for employment/ better employment or in search of employment' in relation to their social and economic background are also discussed here. These discussions have been mainly centered at the all-India level for 6 categories of persons viz. rural male, rural female, rural person, urban male, urban female and urban persons. Unless mentioned otherwise, hereafter, the phrase 'categories of persons' will refer to these 6 categories of persons.

4.0.3 The plan of this chapter is as follows. A section on the estimates of the migrants follows this introductory section. The next section deals with the migration rates for different categories of persons at the state and all-India level as also net-migration rates for major states. Section 3 deals with the distribution of the migrants by location of their last usual place of residence and rural-urban migration streams, inter-state migration for different categories of persons etc. while section 4 looks into the reasons for migration. The next section presents the role of socio-economic forces on migration and the last section (section 6) presents the proportions and distribution of persons whose 'place of enumeration' was the 'usual place of residence' and who 'stayed away from their villages/towns for 60 days or more for employment/ better employment or in search of employment'. Whenever tables are presented at the state level, those are placed at the end of this chapter.

## 4.1 Estimates of Migrants

4.1.1 The estimated number of migrants, considering all the periods of migration, are presented in table 1. It is seen from table 1 that more than 245 million people in India were migrants. This was about 27 per cent of the Indian population, the survey estimate of the total population in India being about 921 million. Of them, a majority - more than half of the total migrants - were in the category 'rural females'. The survey results also show that, among the states, the maximum number of migrants were in Uttar Pradesh - about 45.6 million. Other states showing relatively larger number of migrants were Maharashtra (about 31.5 million), Andhra Pradesh and West Bengal (about 19.2 million each) and Madhya Pradesh (about 19.1 million).

Table 1: Sample and estimated number of migrants in the major states

## 4.2 Migration rates

### 4.2.1 Migration rates among different categories of persons

4.2.1.1 The 'migration rate' for any category of persons of a region (say, rural or urban, state etc.) for a specified period of time since migration has been estimated by the number of persons of that category migrated in that region during the specified period of time per 1000 persons of that category in that region.

4.2.1.2 Table 2 presents the migration rates per 1000 persons of each category as obtained from the earlier surveys viz. 38<sup>th</sup>, 43<sup>rd</sup>, 49<sup>th</sup> and the present survey of NSSO. At the all-India level, considering all the migrants till the date of survey, the following features are observed from the table: (i) percentage of migrants to the total population was higher (33) in urban areas than that (24) in rural areas and (ii) in both rural and urban areas, females showed a higher propensity to migrate than males. Among females, about 43 per cent in rural areas and about 42 per cent in urban areas were migrants whereas only about 7 per cent of rural males and about 26 per cent of urban males reported themselves as migrants. Low migration rate among rural males indicates that males neither from rural areas nor from urban areas have the tendency to migrate to rural areas.

Table 2: Migration rates per 1000 of each category of persons in different NSS rounds

all-India						
round (year)	category of persons					
	rural			urban		
	male	female	persons	male	female	persons
(1)	(2)	(3)	(4)	(5)	(6)	(7)
55 (July 1999 – June 2000)	69	426	244	257	418	334
49 (Jan - June, 1993)	65	401	228	239	382	307
43 (July 1987 – June 88)	74	398	232	268	396	329
38 (Jan - Dec, 1983)	72	351	209	270	366	316

Note: source for the 38<sup>th</sup> and 43<sup>rd</sup> rounds: NSS report number 382, for 49<sup>th</sup> round: NSS report number 430

4.2.1.3 It is seen from the table 2 that, during the period 1983 to 2000, the percentage of male migrants to the total population remained almost constant – about 7 per cent - for rural areas and showed little variation - between 24 to 27 per cent - in urban areas. In the case of females, a rising trend is, however, noticeable in percentage of migrants to the total population over this period. For rural females, it increased steadily from 35 per cent in 1983 to about 43 per cent in 1999 – 2000, while for urban females the increase was from 37 per cent in 1983 to 42 per cent in 1999 – 2000.

#### 4.2.2 Migration rates for different categories of persons at the state level

4.2.2.1 Table 3 (page 38) presents the migration rates per 1000 of each category of persons of the major states for different periods of migration. It is observed from table 3 that the migration rates for different durations of migration were noticeably higher among female population than that among male population in India both for rural and urban areas. Considering all the migrants, it is also observed that migration rates for females were higher than the males for all the major states and this feature was, in general, true for different periods of migration. It is seen from table 3 that, considering all the migrants, among the major states, the migration rate for rural males was the highest in Kerala (209) followed by Maharashtra (127) and for rural females, it was highest in Haryana (557) followed by Rajasthan (524) and Maharashtra (522). In urban areas, the migration rate for males was the highest in Maharashtra (368) followed by Haryana (341) and Andhra Pradesh (302). Among females in the urban areas, the migration rate was the highest in the state of Haryana (592) followed by Punjab (535) and Rajasthan (481).

4.2.2.2 It is observed from the table that the migration rates for the different periods of migration were more among persons in urban India than those in rural India. In the case of major states, the

migration rates for the different periods of migration were, in general, more among persons in urban areas than those in rural areas.

#### 4.2.3 *Inter-state migration and Net-migration rates in the major states*

4.2.3.1 In the present survey no direct question was put to the informants regarding out-migration and thus the survey could not capture the out-migrants from India to other countries. For any state, estimate of net-migrants was obtained by the difference of in-migrants and out-migrants where in-migrants in the state were either from the other states in India or from other countries and out-migrants were those who reported themselves as migrants in other states in India with this state as their last usual place of residence. Number of net-migrants per 1000 persons of the state gives the net-migration rate for the state.

4.2.3.2 *Net-migration rates*: Table 4 presents, considering all the periods of migration, the net migration rates for the major states in India. Table 4 reveals that among the major states, in-migration was the highest in the state of Maharashtra (about 6.05 million) followed by Uttar Pradesh (about 3.87 million), West Bengal (about 2.9 million) and Haryana (about 2.37 million). The out-migration was the highest for the state of Uttar Pradesh (about 5.13 million) followed by Bihar (about 3.45 million) and Maharashtra (about 2.16 million). Among the major states a gain in in-migrants over out-migrants is noticed for most of the states excepting Assam, Bihar, Karnataka, Uttar Pradesh and Tamil Nadu. The table also shows that the net-migration rate was the highest for Haryana (79) followed by Maharashtra (44), West Bengal (27) and Punjab (25).

Table 4: Net migration rates for the major states

major states	in- migrants (in '00)	out- migrants (in '00)	net- migrants (in '00)	net – migration rate (per 1000)
(1)	(2)	(3)	(4)	(5)
Andhra Pradesh	11658	11059	599	1
Assam	1469	2578	-1109	-5
Bihar	5923	34483	-28560	-31
Gujarat	18569	9995	8574	19
Haryana	23674	8667	15007	79
Karnataka	14329	18482	-4053	-8
Kerala	10050	8498	1552	6
Madhya Pradesh	22817	15249	7568	10
Maharashtra	60462	21561	38901	44
Orissa	7352	5418	1934	6
Punjab	18138	12848	5290	25
Rajasthan	15288	18622	3334	7
Tamil Nadu	14487	15595	-1108	-2
Uttar Pradesh	38680	51320	-12640	-8
West Bengal	29002	9318	19684	27

4.2.3.3 *Inter-state migration*: Table 4.1 (page 41) presents the flow of inter-state migrants among the major states, considering in-migrants in those states from other states in India as well as from other countries also. It is seen from Table 4.1 that most of the states received a bulk of the inter-state migrants from the neighbouring states indicating that distance is one of the factors that influenced inter-state migratory movements.

4.2.3.4 *In-migration from other countries*: Table 4.1 shows that about 2.28 million migrants changed their usual place of residence in India from other countries of which about 42 per cent were from Bangladesh and 14 per cent each from Pakistan, Nepal and the Gulf countries. West Bengal (44 per cent), Tamil Nadu (12 per cent), Kerala (10 per cent) and Uttar Pradesh (8 per cent) received high proportion of in-migrants from countries outside India.

### 4.3 Migration streams and different categories of persons

4.3.1 *Migrants in different categories of persons*: Table 5 shows the percentage distribution of migrants and that of 'all' persons (i.e. considering both migrants and non-migrants) for different categories of persons at the all-India level. From the table, the following points are observed: (i) though about 75 per cent of Indian population lived in the rural areas, only 68 per cent of the migrants were in the rural areas, (ii) the lowest share of migrants was observed among the rural males (10 per cent) though rural males comprised about 38 per cent of the Indian population and (iii) about 77 per cent of the migrants were females. The female migrants outnumbered their male counterparts in both rural and urban areas - more so in rural areas than in urban areas.

Table 5: Percentage distribution of migrants and 'all' persons for each category of persons

category of persons	percentage distribution of migrants	percentage distribution of 'all' persons
(1)	(2)	(3)
rural male	10	38
rural female	58	37
rural person	68	75
urban male	13	13
urban female	19	12
urban person	32	25
all	100	100

4.3.2 *Internal migration*: In the present survey, information on the location of last usual place of residence was collected from each of the sample migrants in terms of 7 categories specifying whether he/she was migrated from rural/ urban area, same district/other district, same state/ other state, other countries etc. It may be noted that migrants in any area may be (i) from within the state, (ii) from other states in India and (iii) from other countries. Total migrants considering the migration streams (i) and (ii) together constitute the volume of internal migrants. Table 6 presents, at the all-India level, per 1000 distribution of all migrants by location of their last usual place of residence for each of the 6 categories of persons. It is seen from table 6 that both in rural and urban areas about 99 per cent were internal migrants.

Table 6: Per 1000 distribution of migrants by location of last usual place of residence for each category of persons

all-India								
category of persons	last usual place of residence in							
	rural areas of			urban areas of			other	all
	same state		other states	same state		other states	countries	(incl. n.r.)
	same district	other district		same district	other district			

(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
rural male	487	165	70	87	80	72	33	1000
rural female	706	183	36	36	23	10	5	1000
rural person	674	180	41	43	31	19	9	1000
urban male	212	222	158	127	174	88	16	1000
urban female	287	208	86	160	175	75	8	1000
urban person	257	214	115	147	175	80	11	1000

#### 4.3.3 Rural – urban migration streams

4.3.3.1 *Migrants by last residence in rural or urban areas*: It is seen from table 6 that among the migrants in the rural areas, about 90 per cent migrated from the rural areas while only about 9 per cent from the urban areas. Among males migrated to rural areas, about 24 per cent were from the urban areas where as only 7 per cent of the females migrated to rural areas had their earlier place of residence in urban areas. Among the migrants in urban areas, both for males and females, more had migrated from rural areas than from the urban areas - about 59 per cent of the migrated males and 58 per cent of the migrated females.

4.3.3.2 *Rural – urban migration streams over different periods of migration*: Table 7 presents the distribution of internal migrants by four types of migration streams namely, rural-to-rural, rural-to-urban, urban-to-rural and urban-to-urban for the different periods of migration. It is seen from the table that among the four types of migration streams by rural-urban residence, the rural-to-rural migration was the most dominant one and it accounted for about 62 per cent of the total internal migrants. It is also noticed from the table that in the recent years, percentage share of internal migrants decreased for the rural-to-rural movement while that for each of rural-to-urban, urban-to-rural and urban-to-urban movements increased.

Table 7: Percentage distribution of internal migrants by the four types of rural-urban migration streams for different periods of migration

all-India					
period of migration ( years)	migration stream				
	rural to rural	urban to rural	rural to urban	urban to urban	all
(1)	(2)	(3)	(4)	(5)	(6)
0	47	14	22	17	100
1 - 4	52	9	21	18	100
5 - 9	57	7	21	15	100
10 & above	68	5	17	10	100
all	62	6	19	13	100

4.3.3.3 *Migration in urban areas from rural areas over different periods of migration*: After observing that migration in urban areas from both rural and urban areas increased in recent years, it would be of interest to see whether over the years any pattern is observed in the proportion of rural- to-urban and urban-to-urban migrants among migrants in urban areas. Table 7.1 shows, for different durations of migration, among migrants in urban areas (including the migrants from other countries also), the proportion migrated from rural areas. Table 7.1 reveals that among migrants in urban areas, the proportion migrating from rural areas decreased in recent years - both for males and females. Among the migrants in urban areas who migrated before 10 years,

about 62 per cent came from the rural areas while among those who migrated to urban areas within a year, only about 57 per cent changed their place of residence from rural areas. It may, therefore, be stated that migration in urban areas both from rural and urban areas increased over the years and this was more for urban-to-urban migration as compared to rural-to-urban migration.

Table 7.1: Number of persons migrated from rural areas per 1000 migrants in urban areas for different periods of migration

all-India			
period since migrated (years)	category of persons		
	male	female	person

0	567	563	565
1 – 4	530	520	525
5 – 9	574	566	570
10 & above	643	610	622
all	592	581	586

#### 4.3.4 *Inter-district and inter-state migration for different categories of persons*

4.3.4.1 Table 8 presents for different categories of persons, the proportion migrated from the same district or from other districts, within the same state or from other states. Considering all the migrants up to the year 1999-2000, the survey results show that at the all-India level, inter-district and inter-state migration was relatively less frequent as compared to intra-district and intra-state migration among all categories of persons except among male migrants in urban areas for whom inter-district migration was most frequent. Intra-state and also the intra-district migration was more prominent among migrants in rural areas than among migrants in urban areas - it was most pronounced among female migrants in rural areas.

4.3.4.2 Table 8 shows that among migrants in rural areas, about 72 per cent changed their place of residence within the district, about 93 per cent within the state and about 6 per cent from other states in India. The corresponding proportions among migrants in urban areas were about 40 per cent, about 79 per cent and about 20 per cent, respectively.

Table 8: Number of persons migrated within district, state or from other states per 1000 migrants for different periods of migration

period since migrated (years)	all-India							
	migrated in rural areas				migrated in urban areas			
	within state			from other states	within state			from other states

0	690	222	912	83	429	370	799	191
1 – 4	722	210	932	63	434	388	822	172
5 – 9	733	212	945	50	449	383	832	160
10 & above	750	203	953	40	453	381	834	154
all	742	206	948	46	447	383	830	161
person								
0	632	227	895	127	392	365	757	230
1 – 4	696	214	910	81	409	382	791	199
5 – 9	706	220	926	68	414	382	796	195
10 & above	730	208	938	49	397	395	792	191
all	717	211	928	60	404	389	793	195

4.3.4.3 It is seen from the table that among all the male migrants in rural areas, about 57 per cent changed their place of residence within the district and about 82 per cent within the state. Among females migrated in rural areas, the corresponding figures were about 74 per cent and about 95 per cent respectively. Among all the male migrants in urban areas, movements of about 34 per cent of them were restricted to the same district while for about 74 per cent of them, it was within the same state. Among females migrated in urban areas, the corresponding figures were about 45 per cent and 83 per cent respectively. Higher proportion of intra-district movement for females than males indicates that migratory movements for females were more restricted to the shorter distances than the males.

4.3.4.4 Table 8 also reveals that Inter-district and inter-state migrations both for males and females were more frequent for migrants in urban areas than those for migrants in rural areas. As per the survey results, inter-state migration accounted for about 25 per cent of the male migrants in urban areas but only 14 per cent of the male migrants in rural areas. The corresponding proportions for female migrants in rural and urban India were about 5 per cent and about 16 per cent respectively. It is also observed from Table 8 that, both for males and females, the proportion of migrants from other states had increased during recent years.

4.3.5 *Inter-district and inter-state movement in rural-urban migration streams:* Table 8.1 presents the distribution of internal migrants by intra-district, inter-district and inter-state movements for each of the rural-to-rural, rural-to-urban, urban-to-rural and urban-to-urban migration streams. It is seen from the table that as compared to the other components of rural-urban migration streams, the rural-to-rural movements were restricted to shorter distances. A majority of the rural-to-rural movements (95 per cent) was restricted to within the state of which a bulk (75 per cent) was within the same district while about 20 per cent of the movements for each of the rural-to-urban, urban-to-rural and urban-to-urban migration streams were between the states.

Table 8.1: Percentage distribution of internal migrants by intra-district, inter-district and inter-state movements for each component of rural-urban migration streams				
all-India				
migration stream	% distribution of migrants			
	within state		between states	all
	same district	different districts		
(1)	(2)	(3)	(4)	(5)
rural-to-rural	75	20	5	100
rural-to-urban	44	36	20	100
urban-to-rural	47	33	20	100
urban-to-urban	37	43	20	100

#### 4.3.6 *Migrants in the major states by location of their last usual place of residence*

4.3.6.1 Table 6.1 (page 42) presents, for different periods of migration, per 1000 distribution of the migrants in the major states by location of their last usual place of residence, for each category of persons. In urban areas, for most of the states more than 50 per cent of the migrants were from the rural areas and for some states this proportion was very high. Considering all the males migrated till the date of survey, among the major states, proportion migrating from rural areas to urban areas is seen to be very high in the states of Assam (70 per cent), Orissa (70 per cent) and Bihar (68 per cent). Among migrated females in urban areas, proportion migrating from rural areas was the highest in the state of Orissa (76 per cent) followed by Andhra Pradesh (66 per cent), Kerala (66 per cent) and Uttar Pradesh (61 per cent).

4.3.6.2 It is seen from table 6.1 that for most of the states, inter-state movement was higher among males migrated to urban areas as compared to the other categories of persons. It is also observed that in some states among the migrated males in urban areas, proportion migrating from other states was even more than half of the migrants. Inter-state movement among males migrated in urban areas was the highest for the state of Punjab (57 per cent) followed by Haryana (55 per cent) and Maharashtra (37 per cent).

4.3.7 *Contribution of major states to the volume of internal migration:* Table 9 (page 57) shows, for each category of persons at the all-India level, the proportion of internal migrants who

migrated from rural or urban areas of the major states. The table is presented for all the migrants till the date of survey. It is seen from the table that about one-fifth of the internal migrants in rural areas was from the states of Uttar Pradesh. Other states with high contribution to the volume of internal migration in rural areas were Maharashtra (11 per cent), Madhya Pradesh (8 per cent) and West Bengal (8 per cent). In the case of migrants in urban areas, leading contributors towards migration, among the major states, were Uttar Pradesh (17 per cent), Maharashtra (13 per cent) and Andhra Pradesh (10 per cent) and Tamil Nadu (9 per cent). Uttar Pradesh was the state with highest contribution (18 per cent) to the male migrants in urban areas and to the female migrants of both rural and urban areas (22 per cent and 18 per cent respectively). The highest contributing state to male migrants in rural areas was Maharashtra (16 per cent).

#### 4.4 Reason for migration

##### 4.4.1 Reason for migration among different categories of persons:

4.4.1.1 Table 10 presents the distribution of the migrants by reason for migration corresponding to the different periods of migration. The table is presented for each category of persons at the all-India level. In the present survey, reason for migration was collected from the sample migrants in terms of 13 categories. Of these, the first 5 categories viz. in search of employment (01), in search of better employment (02), to take up employment/ better employment (03), transfer of service/contract (04) and proximity to the place of work (05) were directly related to employment and could be considered as economic factor for migration. The categories marriage (11) and movement of parents/earning members (12) were the two major social factors for migration. Other causes for migration were for pursuing studies (06), acquisition of house/flat (07), housing problem (08), social/political problem (09) and health (10) etc.

4.4.1.2 A look at the results presented in table 10 shows that the factors inducing bulk of the females to migrate were mostly quite different from those inducing males to migrate. Among the male migrants, 30 per cent in rural areas and 52 per cent in urban areas migrated due to the reasons relating to employment while among the female migrants, the corresponding proportions were only 1 per cent in rural areas and 3 per cent in urban areas. Among the rural males, the percentage of migrants due to this reason was almost the same over the different periods of migration but among the urban males, it decreased with decrease in time elapsed since migration.

4.4.1.3 In case of rural females, migration occurred mainly due to marriage (about 89 per cent) whereas for urban females, the two main reasons for migration were 'marriage' (59 per cent) and 'movements of parents/earning members' (31 per cent). For females of both rural and urban areas, the proportion of migrants due to 'marriage' decreased with decreasing period of time elapsed since migration and that due to 'movement of parents/earning members' showed a change in the reverse direction.

4.4.1.4 The survey results show that change of place of residence for the purpose of study increased in recent years for all the categories of persons. It was more pronounced for rural males - from 1 per cent among those who migrated before 10 years to 13 per cent among those who migrated within a year.

4.4.2 *Reason for migration among different categories of persons in the major states:* Table 10.1 (page 59) shows the distribution of migrants by reason for migration for each of the major states. The table is presented for different periods of migration. It is seen from the table that, among major states, of the males migrated in rural areas till the survey, proportion of migrants for employment reason was the highest in Haryana (40 per cent) followed Rajasthan (39 per cent), Maharashtra (39 per cent) and Punjab (37 per cent). In urban areas, proportion of males reported to have migrated in search of employment /better employment or for other reasons related to employment was the highest in the state of Punjab (62 per cent), followed by Assam (60 per cent), Maharashtra (59 per cent), Karnataka (57 per cent) and Gujarat (56 per cent). Among rural females, migration consequent to marriage was the highest in Bihar (98 per cent) followed by Uttar Pradesh (95 per cent), Rajasthan (93 per cent). In case of urban females, migration due to this reason was the highest in Bihar (76 per cent) followed by Punjab (73 per cent), Madhya Pradesh (70 per cent) and Uttar Pradesh (67 per cent).

#### 4.4.3 *Reason for migration separately for each of the rural-urban migration streams:*

4.4.3.1 Table 11 shows, considering all the periods of migration, per 1000 distribution of the migrants by reason for migration for each of the four types of rural-urban migration streams, separately for males and females at the all - India level. It is seen from the table that among females in rural India, while in general, 89 per cent migrated consequent to marriage (sub –

section 4.4.1.3), there was a significant difference in this proportion between those migrating from rural areas (91 per cent) and those from urban areas (64 per cent). Among females migrated in urban areas, while as a whole about 59 per cent did so consequent to marriage, the corresponding proportions were about 61 per cent among those who migrated from rural areas and about 55 per cent among those who migrated from the urban areas itself. Migration among females due to 'movement of parents / earning members' was the highest for the urban - to - urban migration stream.

Table 11: Per 1000 distribution of migrants by reason for migration for each of the rural - urban migration streams  
all-India

reason for migration	male				female

9. other reasons (incl. n.r.)	228	432	90	179	31	106	50	75
all	1000	1000	1000	1000	1000	1000	1000	1000

4.4.3.2 It is also seen from table 11 that among males, movement for employment reason was the highest for rural to urban movements - about 57 per cent of these movements were caused by reasons relating to employment. It is also observed from the table that change of place of residence for study purpose was higher among males migrated from the rural areas.

#### 4.4.4 Reason for inter-state migration among different categories of persons

4.4.4.1 The survey results reveal that a significant portion of the migrants in urban areas were subject to movements from the other states - about 20 per cent of the migrants in urban India (reference: summary table 6). In some of the states, considering all the migrants till the date of survey, the extent of migration in urban areas from other states was even more than 30 percent of the migrants e.g. Haryana (47 per cent), Punjab (36 per cent) and Maharashtra (32 per cent) (reference: summary table 6.1, page 56). It would, therefore, be of interest to see the reasons behind such movements from the other states. Here, an attempt has been made to see the reasons for inter-state movements during the recent times (i.e. during the period 1- 4 years) by considering the sector (rural/urban) of origin and of destination together.

4.4.4.2 Table 12 (page 74) presents the distribution of the persons migrated from other states during the period 1- 4 years by reason for migration. It is seen from the table that, at the all-India level, during the period of migration 1 to 4 years, among the migrants in rural areas from the other states, about 18 to 19 per cent migrated for reasons directly related to employment whereas corresponding proportion for migrants, in general, in rural areas during the period 1 to 4 years was only 9 per cent (reference: summary table 10.1, page 63). Among all migrants in urban areas during the period 1 to 4 years, about 24 per cent migrated for reasons relating to employment (reference: summary Table 10.1, page 64) whereas the proportion of migrants for

reasons relating to employment among those who migrated from other states were much higher - 46 per cent of migrants from rural areas and 29 per cent among those who migrated from urban areas.

4.4.4.3 It may be observed from table 6.1 that, in urban areas of some of the states e.g. Haryana, Punjab and Maharashtra, a high proportion of movements from rural areas of other states were reported during the period 1 to 4 years. It was about 43 per cent in Haryana, about 39 per cent in Punjab and about 21 per cent in Maharashtra. It is seen from the table 12 that in all these 3 states, the main reasons behind such movements were linked to employment – about 71 per cent of migrants in urban Punjab migrated from rural areas of other states in search of employment /better employment etc., while for either Haryana or Maharashtra, the corresponding figure was about 47 per cent.

4.4.4.4 As observed from table 6.1, migration in urban areas from urban areas of other states, during the period of migration 1 to 4 years, was pronounced in the states of Madhya Pradesh (16 per cent), Punjab (13 per cent), Maharashtra (12 percent) and Karnataka (9 per cent). It is seen from table 12 that about 27 to 30 per cent of the migrants from urban areas of other states reported to change their place of residence in urban areas of these states for reasons relating to employment.

#### 4.4.5 Comparison between 49<sup>th</sup> round and 55<sup>th</sup> round:

Table 13: Per 1000 distribution of migrants by reason for migration in different NSS rounds

reason for migration	migrated in rural areas				migrated in urban areas

7. movement of parents/earn. memb.	208	260	237	63	283	270	495	310
s.t.(6-7)	231	354	853	951	292	286	812	895
8. studies	41	53	11	4	180	62	70	13
9. other reasons (incl. n.r.)	251	290	53	35	113	133	69	62
all	1000	1000	1000	1000	1000	1000	1000	1000

4.4.5.1 As in the 49<sup>th</sup> round, reasons for migration in the 55<sup>th</sup> round survey were recoded in terms of 13 categories (12 specific and 1 residual). This code structure was different from the 38<sup>th</sup> and 43<sup>rd</sup> round. Table 13 presents the comparative feature of the distribution of the migrants by reasons for migration as obtained from the 49<sup>th</sup> round and the 55<sup>th</sup> round surveys of NSSO. It is seen from the table that, in both the surveys, the prominent reasons for the movement of the females were 'marriage' and 'movement of parents/earning members'. As observed, in both the rounds, the most important reasons for the males for migrating to urban areas were linked to employment. In the case of males who migrated to rural areas, as compared to the other categories of persons, for a high proportion of migrants their movements were due to 'other

reasons' such as acquisition of house/flat, housing problem, health, social/political. This is observed in both the surveys.

#### 4.5 Socio-economic forces and migration

4.5.1 *Social dimension*: Table 14 exhibits the number of migrants per 1000 persons of each social group. The table is presented separately for each category of persons considering migrants for all the durations. From the table, the general feature of migration for different categories of persons (i.e. higher migration rate among persons in urban areas than that among persons in the rural areas and higher migration rate among females than males) is observed for each of the social groups. The proportion of migrants to the total population of the social group was the highest for the social group 'other' - both in rural and urban areas.

Table 14: Number of migrants per 1000 persons of each social group for each category of persons

all-India social group	category of persons					
	rural			urban		
	male	female	person	male	female	person
(1)	(2)	(3)	(4)	(5)	(6)	(7)
scheduled tribe	56	357	204	282	411	345
scheduled caste	64	434	244	225	393	305
other backward class	65	428	242	237	417	323
other	81	443	259	276	426	347
all	69	426	244	257	418	334

#### 4.5.2 Migrants classified by monthly per capita expenditure (MPCE) class:

4.5.2.1 In the present survey on employment-unemployment, data on consumption expenditure was collected through a separate work sheet which was integrated with the employment-unemployment schedule. Table 15 presents, considering all the migrants of each category, the distribution of migrants by household MPCE class and the number of migrants per 1000 persons in different MPCE classes.

4.5.2.2 It is seen from the table that, for each category of persons, the migration rate was, in general, higher for the higher MPCE classes. In rural India as a whole, while about 24 per cent of the population were migrants, as high as 39 per cent of the persons belonging to the highest MPCE class (i.e. Rs. 950 & above) reported themselves as migrants. In urban India, whereas the percentage of migrants for the highest MPCE class (Rs. 1925 & above) was 46, it was 33 as a whole.

Table 15: Migration rates for different MPCE classes and Per 1000 distribution of migrants by household MPCE class

665 – 775	108	103	105	278	453	360
775 – 915	109	91	98	307	436	367
915 – 1120	133	97	111	371	483	422
1120 – 1500	136	92	109	412	486	446
1500 – 1925	65	45	53	388	473	427
1925 & above	61	41	49	433	493	461
all	1000	1000	1000	257	418	334

4.5.2.3 The table also reveals that the proportion of migrants is more in the higher MPCE classes as compared to the population in those classes as a whole. In the rural areas, while about 42 per cent of the population (distribution of all persons by MPCE class, as obtained from Sch.10, has been provided in the summary table 22, page 37), in general, could spend more than Rs. 420/- per month per person, about 49 per cent of the migrants could spend more than that amount. In urban areas, about 43 per cent of the population could spend more than Rs. 665/- per month per person whereas 53 per cent of the migrants could spend more than that amount. This difference was reported to be more for males than for females - both in rural and urban areas.

4.5.3 *Activity status and migration*: Table 16 presents the distribution of the migrants, considering all the periods of migration, by their usual principal activity status before and after migration. The table shows that a majority of the male migrants, both in rural and urban areas, belonged to the labour force – about 66 per cent in rural areas and about 68 per cent in urban areas. Male migrants, both in rural and urban areas, were mainly from the employed category - about 52 per cent in rural and about 45 per cent in urban. The majority of the female migrants in both the sectors were from outside the labour force - about 80 per cent in rural and 91 per cent in urban. The table also reveals that among the migrants - males or females - the share of labour force (mainly the employed) had increased with migration. This was true in rural and urban areas both. The proportion of employed among the migrants increased by about 15 per cent in rural India and about 13 per cent in urban India as compared to their position before migration. This

increase was more pronounced among males migrated to urban areas (about 23 per cent) than in other categories of migrants. A substantial reduction in the proportion of unemployment due to migration was also reported among the male migrants in urban areas – from 10 per cent before migration to 2 per cent after migration.

Table 16: Per 1000 distribution of migrants by their usual principal activity status before and after migration for different categories of migrants

#### 4.6 Staying away from present usual place of residence for 60 days or more for employment /better employment or in search of employment

4.6.1 Having noticed that a significant section of the Indian population migrated for reasons related to employment, one could take a look at the short duration movements of people in search of employment or for employment/ better employment. In the present survey, along with migration particulars, for each member of the sample household, it was first ascertained whether the place of enumeration (village/ block) was his/her present usual place of residence and if so, information were collected on his/her staying away from the place of enumeration for 60 days or more for employment or in search of employment during last 365 days preceding the date of

survey. The period of staying away from the village/town for 60 days or more was considered irrespective of the continuity of stay or the change of the place of stay.

4.6.2 It is seen from the detailed table M9 of the Appendix that during 1999-2000 more than 98 per cent of the household members reported their place of enumeration as their usual place of residence.

Table 17: Estimated number of persons whose place of enumeration was their usual place of residence and who stayed away from their villages/towns for 60 days or more for employment or in search of employment

all- India	53921	30620	15003	9181	108725	2690	1554	1236	742

4.6.3 Table 17 presents, for each of the major states, the number of persons whose place of enumeration (village/town) was their usual place of residence and who stayed away from their place of enumeration for 60 days or more in search of employment or for employment/better employment. In this section, hereafter, these persons who stayed away from their villages/towns for 60 days or more for reasons relating to employment will be referred as 'persons temporarily staying away for employment'. The table reveals that, during the period 1999-2000, more than 10 million people in India had to stay outside their villages/towns for 60 days or more for employment reasons.

4.6.4 *Distribution of persons temporarily staying away for employment:* Table 18 presents the number of 'persons temporarily staying away for employment' per 1000 persons of each

category and their distribution over these categories of persons. The survey results show that about 1 per cent of Indian population reported for staying outside village/town for 60 days or more for employment opportunities. This proportion was slightly more in rural areas than in urban areas and was more for males than for females. It is also seen from the table that among the 'persons temporarily staying away for employment', more than three-fourths were in the rural areas and about 64 per cent of these persons were males.

Table 18: Number of 'persons temporarily staying away for employment' per 1000 persons of each category and their distribution over these categories of persons

all-India		
category of persons	percentage distribution	number per 1000
(1)	(2)	(3)
rural male	50	15
rural female	28	9
rural person	78	12
urban male	14	12
urban female	8	8
urban person	22	10

4.6.5 *Persons temporarily staying away for employment' by broad usual principal activity status*: Table 19 presents the number of 'persons temporarily staying away for employment' per 1000 persons of different broad usual principal activity statuses for each category of persons. It is seen from the table that, for each category of persons, proportion of persons staying away from their villages/towns for 60 days or more for employment or in search of employment was the highest in the 'unemployed' category - about 5 per cent in rural areas and about 2 per cent in urban areas - followed by that in the 'employed' category. It is also observed that, though some persons were categorised as 'not in labour force' by major time criteria, a few of them reported for staying away from their villages/towns in search of employment or for employment. Among the employed, a higher proportion of casual labour moved out of the village/town for employment/ better employment or in search of employment - it being higher for rural males (4 per cent) as compared to the other categories of persons.

Table 19: Number of persons whose place of enumeration was the upr and who stayed away from their villages/ towns for 60 days or more for employment or in search of employment per 1000 persons of different usual activity status (ps) for each category of person

all-India

unemployed	56	25	49	21	13	20

not in labour force	6	7	6	10	8	9
all	15	9	12	12	8	10

4.6.6 *'Persons temporarily staying away for employment' in different social groups*: Table 20 gives, for each category of persons at all-India level, the number of persons staying away from their villages/towns for 60 days or more for employment purpose per 1000 persons of different social groups. The table also presents the distribution of these persons over the different social groups. It is seen from the table that among persons staying away from their villages/towns for 60 days or more for employment opportunity, more were from the social group 'other back ward class'- about 33 per cent of such persons. The table also shows that number of persons staying away from their villages/towns for employment purpose per 1000 persons of the social group, was the highest in the social group 'scheduled tribe' in the rural areas. In the urban areas, this proportion was the highest among persons belonging to 'other backward class'.

Table 20: Distribution of 'persons temporarily staying away for employment' by social group and the number of such persons per 1000 persons of different household social groups

all-India							
social group	distri- bution	number per 1000 persons of the category					
		rural			urban		
		male	female	person	male	female	person
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)

scheduled caste	20	16	10	13	11	5	8
other backward class	33	13	7	10	17	12	15
other	29	13	7	10	10	7	9
all	100	15	9	12	12	8	10

4.6.7 *'Persons temporarily staying away for employment' by broad general education category*: Table 21 presents, for different categories of persons in India, the distribution of 'persons temporarily staying away for employment' and that of 'all' persons by some broad general education category. It is seen from the table that, in rural areas, the proportion of persons staying away for 60 days or more from their usual place of residence for employment opportunity was higher in the two education categories 'not literate' and 'secondary and above' as compared to the proportion of persons belonging to these two education categories. This difference was more pronounced among rural females belonging to the education category 'not literate'- while about 62 per cent of the rural females were not literate, about 70 per cent of the rural females belonging to the education category 'not literate' stayed outside village/town for employment purpose. However, in the urban areas, the proportion of persons staying outside their villages/towns for 60 days or more for employment opportunity was in almost commensurate with the proportion of persons in all the education categories.

Table 21: Per 1000 distribution of 'persons temporarily staying away for employment' and that of 'all' persons by broad general education category

all-India						
general education category	category of persons					
	male		female		person

all (incl. n.r.)	1000	1000	1000	1000	1000	1000

Note: source for distribution of all persons by general education category is report no. 458, NSS 55<sup>th</sup> round.

#### 4.6.8 'Persons temporarily staying away for employment' by MPCE class:

4.6.8.1 Table 22 gives the distribution of those persons who stayed away from their villages/towns for 60 days or more for employment purpose and that of 'all' persons by household MPCE class. It is seen from the table that in the rural areas, both for males and females, the proportion of persons staying outside village/town for employment reason was higher in the lowest MPCE class (i.e. MPCE less than Rs. 225/-) and another middle MPCE class (viz. Rs. 340 to Rs. 380) than the proportions of such persons belonging to other MPCE classes. In the rural areas, about 13 per cent of the 'persons temporarily staying away for employment' were from the lowest MPCE class whereas another 12 per cent were from the MPCE class Rs. 340 to Rs. 380. In urban areas, about 20 per cent of the 'persons temporarily staying away for employment' were from one of the middle MPCE classes (viz. Rs. 500 to Rs. 575) which was much higher than the proportion of such persons in any other MPCE class, both for males and females.

Table 22: Per 1000 distribution of 'persons temporarily staying away for employment' and that of 'all' persons by household MPCE class

Note: source for distribution of 'all' persons by mpce class is report number 458, NSS 55<sup>th</sup> round.

4.6.8.2 It is seen from the table that proportion of 'persons temporarily staying away for employment' was higher among persons spending less in rural areas whereas in the urban areas, this proportion was higher among persons spending relatively more. In the rural areas, about 49 per cent of the population were below the MPCE Rs. 380/- while about 54 per cent of the 'persons temporarily staying away for employment' were below that per capita expenditure level. In the urban areas, while 43 per cent of the population could spend more than Rs. 665/- per capita per month, about 47 per cent of the 'persons temporarily staying away for employment' could spend that amount.

Note 1: 'all - India' estimates are based on data for all states/union territories.

Note 2: For any state, 'migration rate' in column 16 is the number of in-migrants (of a particular category of persons) in that state from other states (from rural and urban areas separately) per 1000 persons (of that category) of that state

Table 12: Per 1000 distribution of migrants from other states by reason for migration

## Note A

### Explanatory notes on detailed tables

1. In the detailed tables, if sample size for any row was observed to be zero (0), all the cell entries of that row were filled in with ‘-’.

#### 2. Codes used in the Appendix Tables:

***Period since leaving the last usual place of residence:*** The period elapsed since migration (i.e. period elapsed since leaving the last usual place of residence till the date of survey) was recorded in completed number of years like 0, 1, 2, 3 etc., the part of any year was ignored to get the years since leaving the last usual place of residence. Periods of temporary stay (less than 6 months) in other places after leaving the last usual place of residence were also included for determining period elapsed since migration.

***Reason for migration:*** Reasons for leaving the last usual place of residence (i.e. reasons for migration) were recorded in terms of 13 categories. The codes used for recoding the reasons for migration were:

in search of employment – 01, in search of better employment – 02, to take up employment/ better employment – 03, transfer of service/contract – 04, proximity to place of work – 05, studies – 06, acquisition of own house/flat – 07, housing problem – 08, social/ political problem – 09, health – 10, marriage – 11, migration of parent/earning member – 12 and other reasons - 19.

***Occupation division:*** Codes are as per NCO (1968) revised edition (3 digit code).
